

Hufcor moveable walls are designed with customer flexibility in mind into position across an opening.

**1. Lever Closure Panel- LCP**

Sometimes referred to as the Telescopic End Panel, this panel is normally the final closure panel and exerts pressure to the side jamb forming the acoustic closure.

**2. Standard Panel- SP**

This is the intermediate panel and is of solid construction and forms the main element of the folding wall.

**3. Corner Panel- CP**

This panel can be used to form two walls abutting at 90° or 135° angles. This principle can also be adapted to form T Junctions.

**4. Single Inset Pass Door- SIPD**

An inset pass door can be provided within a solid panel to allow access between areas.

**5. Double Inset Pass Door-DIPD**

Similar to the single door, we also offer a double door application.

**6. Vision Panels – VP**

Small vision panels can be incorporated to allow sight between rooms or to comply with current legislation.

**7. Vision Panels (large) –VP**

Larger vision panels are available that provide an attractive variation to the solid panel appearance.

**8. Hinged End Pass Door –HEPD**

As an alternative to the inset pass door. Hufcor are able to offer this variation to place of the Lever Closure Panel

Whilst these examples will reflect most cases, we are always pleased to review specific designs that are not reflected.
