HUFCOR
movable partition systems

We define **IN THIS WAY** the quality of
Our real wood veneer boards*

Design development.

Veneers are usually sorted according to the pattern construction. Depending on each kind of wood, you can obtain till 20 boards with veneer from one trunk in continuous development. The veneers do appear of highest quality in their pattern appearance, the veneer widths are in one board, as well as usually till 10 boards the same.

Board character.

Veneers from minimum 4 different veneer packages are rashly put together (smooth, flowered, knocked down and pushed). It creates a so called "plank character" construction, optically similar to glued solid wood.

*Treated to the highest standards with UV-Acryl-Lacquer.

HUFCOR – movable partition systems
